

ENVIRONMENTAL POLICY

EP01 Issue 6

AMAG Technology, Tewkesbury, UK

AMAG Technology is one of the foremost innovators and suppliers within the Security Industry, providing fully integrated security solutions throughout the world.

The company has been serving and protecting its customers for over 40 years, delivering 30,000 systems across 110 countries by working together and listening to its customers, including their environmental expectations.

In response, the company recognises the need to minimise its overall environmental impact, limit ground & air pollution, conserve energy and maximise the re-use and recycling of materials, the latter including a Take Back* mechanism for products.

To support these activities, the leadership team is responsible for monitoring the installed Environmental Management System (EMS), and ensuring its ongoing effectiveness and continual improvement; the EMS being consistent with the requirements of the international quality management standard ISO14001.

Further, the leadership team understands, monitors and evaluates the internal and external issues that impact the EMS, and how these and those of interested parties are addressed, including applicable regulatory & other requirements.

Finally, Environmental Objectives are established to support this Policy, with due consideration to the context of the business' operation, its strategic direction and the needs & expectations of its customers.

For AMAG Technology, Tewkesbury

H Johnson
