EASILY MANAGE SITUATIONAL AWARENESS

SYMMETRY™
CONTROL ROOM
COMMAND AND CONTROL SOFTWARE UNIFIES SECURITY

AMAG
TECHNOLOGY
A G4S COMPANY

Symmetry Control Room captures alarms from all systems in a single window allowing users to make better decisions, operate more efficiently and respond to incidents more quickly. Symmetry Control Room automates manual disconnected processes and provides a clear procedure, eliminating operators from having to jump from application to application when responding to alarms. It streamlines and automates workflows that exist between disparate systems to achieve optimal command and control.

Manage all alarms and events from multiple systems and operate your entire ecosystem from Control Room including video, intrusion, visitor management, identities, incidents and access control. The open-source platform provides unlimited flexibility to also communicate with best-of-breed technologies.

Users can geographically monitor device generated alarms, control security devices, and respond to events in real-time using dynamic multi-layer vector based maps to better visualize a unified security environment. Customize graphical interfaces with advanced mapping to easily navigate Symmetry Access Control, Symmetry CompleteView Video or any third party system. Control Room supports almost any graphical format, providing users flexibility and total graphical freedom.

Symmetry Control Room allows you to migrate to Symmetry Access Control at your own pace, providing an easy to use interface during the transition. Make smarter decisions when you have all the information. Streamline processes to meet compliance, and save money when you automate workflows and reduce training time.

Manage all alarms in real-time in a single operational window

Supports many graphic formats and PDF background providing freedom of choice

Easily drag and drop camera icons for display on video wall

Quickly display and/or control devices within a map or graphic

Build custom virtual matrices with flexible display options

Use maps to easily geolocate the nearest camera to an event
Add overlays to graphics or camera views for status and control

Each operator can have a unique role based GUI

Unify siloed VMS systems in the same video wall

ALL INFORMATION ABOUT ALARMS AND EVENTS ON ONE MONITOR TO MAKE PROACTIVE DECISIONS.
